

Our **orthopaedic Vital Resting Places from the series Bendson** are made of high-quality materials. The densely woven plush provides a warm and soft place to lie. The tightly woven fabric is particularly robust and of the highest quality. The various places to lie consist either of viscoelastic foam flakes or of state-of-the-art 2- or 3-layer systems:

1. Layer: PU Comfort Foam

- extra stable in shape
- high restoring ability prevents depressions forming
- good thermal insulation
- open-pored and breathable

2. Layer: Viscoelastic Foam

- premium-quality viscoelastic foam
- adapts to body shape and temperature
- relieves spine and joints and prevents pressure sores
- foam is particularly stable in shape and always returns to its original shape (memory effect)
- provides highest lying comfort for a healthy sleeping position

3. Layer: Layer of Polyester Fleece Filling

- provides very good air circulation
- prevents heat accumulation through continuous exchange of heat and temperature
- offers additional soft lying comfort

Orthopaedic Vital Resting Places relieve pressure-sensitive body areas and support a good sleeping position. They can be particularly recommended for older and physically impaired pets.
